RE: Graduate Electrical Engineer

Dear hiring manager,

I am excited to express my interest in your company's newly posted job as an electrical engineer. My academic records show that I completed a Master's degree in Electrical Power Engineering at the University of Greenwich Medway campus in the year 2023. I have done my internship at Rashid al Owais, Sharjah, UAE (January 2023- September 2023).

I was in charge of engineering services at a company Create Builders (2019-2020) in my previous position, which included designing, developing, and maintaining electrical systems for structures. worked in ventilation, heating, and lighting. Similarly, my experience with ultra-contractors demonstrates that electrification at the apartments was linked while installing, testing, and commissioning 160KVA, 500KVA dry-type transformers, and 160KVA, 125KVA DG sets.

Through my undergraduate and graduate programs, I have developed an instinctive interest in power engineering disciplines. I am highly interested in learning about the engineering possibilities of electrical engineering. I have effective communication skills and the motivation to take a challenging work. I feel my educational background and skill set make me the ideal candidate for this position. Furthermore, it would be a great chance for me to advance my career.

Thank you for your time. It will be a delight to talk with you and go beyond this possibility as soon as possible. I'm hoping to hear from you soon.

Sincerely

Jithin Nadumuttath
